

UNSOLICITED PROPOSALS

Due to an increased interest by potential partners for cooperation with the E4E@mk project, in Outcome 1 – Non Formal Vocational Education and Training, the Project Implementation Unit developed a scheme which is applied in the selection process when financing unsolicited proposals.

Each proposal submitted to the project should lead to employment of trained persons or improvement of the non-formal vocational education and training system.

How to apply: A brief description of the proposed activities (one page) along with a budget (total amount) should be sent to the e-mail address: Boris.Trimcev@helvetas.org marked "Unsolicited proposals".

Selection steps: During the selection process, the proposal is primarily directed towards the possibility for funding in accordance with the measures of the [Operational Plan for active programs, employment measures and services on the labor market](#). If there is a possibility, the applicant will be introduced to the responsible person in the Employment Agency.

If the submitted proposal can not be supported by any of the measures, then the Project evaluates the possibility for employment of the trained persons. In case of employment of over 30 people, the responsible persons of the E4E@mk project shall start communicating with the applicant and coordinate on the financing of the proposal.

In case the submitted proposal does not generate more than 30 direct employments, then, the Project shall take into account the status of the applicant, i.e. whether it is an association/associations or a group of system actors (institutions, schools, companies, training centers, etc.), which belong to one or more economic sectors, and whose aim is to implement more trainings in the future, and consequently an increased number of employments. In that case, the responsible persons of the E4E@mk project shall start communicating with the applicant and coordinate on the financing of the proposal.

If the submitted proposal can not be supported in accordance with the afore-mentioned criteria, then, the innovation of the proposal shall be taken into account. Namely, if the proposed activities are evaluated as innovative, have not been previously piloted on the market and lead to sustainable employment, in that case, the responsible persons of the E4E@mk project start communicating with the applicant and coordinate on the financing of the proposal.
